

# Jessica Tang

[jessicao.tang@mail.utoronto.ca](mailto:jessicao.tang@mail.utoronto.ca) | [jessicaxtang.github.io](https://jessicaxtang.github.io)

*Research Interests: Natural Language Processing, Interpretability, Human-Computer Interaction, Philosophy*

## EDUCATION

---

### BASc in Engineering Science in Machine Intelligence

Sep 2022 – Apr 2026

*University of Toronto*

## RESEARCH EXPERIENCE

---

### Undergraduate Research Intern

May 2025 – Aug 2025

*Microsoft Research | Dr. Sharad Agrawal and Dr. Shraddha Barke*

- Investigating interpretability in multi-agent LLM systems.

### Machine Learning Researcher (NLP)

Apr 2024 – May 2025

*KITE Research Institute | Dr. Shehroz Khan*

- Led the design and implementation of an end-to-end Python pipeline leveraging LLMs for quality assessment and textual feedback for virtual physical rehabilitation, creating an adapted Auto-CoT algorithm.
- Developed a graph network (ST-GCN) for classification tasks and applied Grad-CAM for model explainability.
- Programmed tokenization of spatial-temporal skeletal data with a variational autoencoder for input to LLMs.

### Computational Neuroscience Research Assistant

May 2023 – May 2025

*Cognitive Neuroscience and Sensorimotor Integration Lab | Dr. Matthias Niemeier*

- Designed a task-agnostic CNN architecture to model robotic hand grasp predictions and object classification as biological control systems, achieving 81.5% and 85% test accuracy, respectively.
- Conducted neural network explainability analysis (Neuron Shapley, activation maximization) for ML and brain correlation. Exploring methods of information flow with linkage prediction in graph convolution networks.
- Compared reinforcement learning reacher with TD3 to brain functionality, observing minimal feature task integration between realistic and unrealistic physics environments. Used DCI-ES framework and beta weight regression to analyze predictor effects.
- Programmed a fully automated EEG experiment with synchronized motion capture sensors, user interface, and data collection, writing Python wrappers for Motive software.

### Perception Software Engineer (Computer Vision)

Feb 2024 – Mar 2025

*Toronto Robotics and AI Lab (TRAIL) | Dr. Steven Waslander*

- Implemented lane clustering and validation algorithms to develop an automatic scene labeller, achieving 95% mean average precision using multimodal data from topological maps, LiDAR, GPS, and cameras.
- Trained a transformer architecture on a dataset for autonomous vehicles under adverse weather conditions.
- Optimized a Python conversion pipeline of a 100,000+ node DMP map to a fully connected HD map.

## PAPERS & PROJECTS

---

- [Paper] **J. Tang**, A. Abedi, T. Colella, S. Khan. [Rehabilitation Exercise Quality Assessment and Feedback Generation Using Large Language Models with Prompt Engineering](#). *IJCAI 2025 ARIAL Workshop*. To appear in *Communications in Computer and Information Science (CCIS)*, Springer, 2025.
- [Paper] H. Donnelly, T. Reza, **J. Tang**, M. Niemeier (2025). Lazy Task Feature Integration by Motor Control Systems across Realistic and Unrealistic Reinforcement Learning Environments. (*In Preparation*).
- [Workshop] **J. Tang**, N. Yang, H. Hussain (2025). [Spatio-temporal Multimodal Wildfire Spread Prediction: Exploring Vision Transformers and Lightweight Models](#). *ECE324 Final Project*.
- [Poster] **J. Tang**, A. Abedi, S. Som, T. Colella, S. Khan (2024). [Large Language Models into Virtual Cardiac Rehabilitation to Provide Real-Time Assistance to Heart Failure Patients](#). *TransformHF Symposium*.

- [Poster] T. Reza, S. Luo, E. Jordan, **J. Tang**, K. Patel, M. Niemeier (2024). [Emergence of dorsal-like and ventral-like properties in artificial neural network](#). *Society of Neuroscience Conference*.
- [Poster] T. Reza, S. Luo, G. Singh, **J. Tang**, R. Jain, M. Niemeier (2024). [Comparative analysis of optimization trends in dorsal and ventral stream using computation model](#). *Cognitive Neuroscience Society Conference*.
- [Workshop] T. Cai, K. Howard, B. Zhou, **J. Tang**, V. He, D. Liu (2022). [Modular Can-Sized Satellite System with Active Attitude Control](#). *European Space Agency, International CanSat Competition*.
- [Workshop] **J. Tang**, (2021). [Deep Reinforcement Learning Controller for Indoor Farming](#). *Nanyang Technological University, International Student Conference on Artificial Intelligence*.

## SCHOLARSHIPS & AWARDS

---

\$30,000 Award for Diversity and Innovation in Technology, <i>Royal Bank of Canada</i>	2024
\$7500 Research Award, <i>Transform HF</i>	2024
\$400 Best Project Overall, <i>Cohere</i>	2023
\$2000 Dean's Merit Award, <i>University of Toronto</i>	2022
\$1000 Ingenious+ National Finalist and Regional Innovation Winner	2022
\$1250 District/Authority Scholarship in Technical and Trades Training	2022
SGD 1000 Best Presenter, <i>International Student Conference On Artificial Intelligence</i>	2021
\$560 AI4Impact Grant Award, <i>AI4ALL</i>	2021

## LEADERSHIP, TEACHING, & FELLOWSHIPS

---

### **President and Founder, *Illuminaite Academy*** **Jul 2020 – Present**

- Increased accessibility to ethical computer science (CS) & AI education by leading an executive team of over 20 and reaching 1000+ participants from 42 cities and 11 countries worldwide, over \$3,000 in funding.
- Directed and hosted 16 interdisciplinary AI workshops, hackathons and events featuring guest speakers from organizations including Zoom, IBM, MIT, University of Toronto (UofT), and Simon Fraser University.
- Organized the UofT AI Ethics Hackathon, attracting students of various disciplines, including non-technical backgrounds.
- Taught Introduction to CS & AI programs and pioneered the first high school AI Ethics Competition in North America.
- Over \$3000 in funding from AI4ALL, University of Toronto, NCWIT, SAP, and Perplexity AI.

### **Course Instructor, *Wave Learning Festival*** **June 2021 – Jul 2021**

- Taught Introduction to Artificial Intelligence to 74 students, focusing on the fundamentals of neural networks and ethics.

### **AI Scholar, Curriculum Developer, *AI4ALL*** **Jul 2020 – Apr 2021**

- Selected as one of 32 students across Canada for AI4ALL Summer Program.
- Programmed face detection and classification of human facial expressions training convolutional neural networks.
- Developed introductory AI curriculum crash course for middle and high school students, implemented by the Bronx School of Sciences, featured by National Center for Women & Information Technology (NCWIT)
